The problem

Likes do not tell you which post paid off.

Indie founders and small teams selling digital products post every day. Likes and clicks stop before the purchase, so the next post is a guess.

The loop

Every purchase teaches the next post.

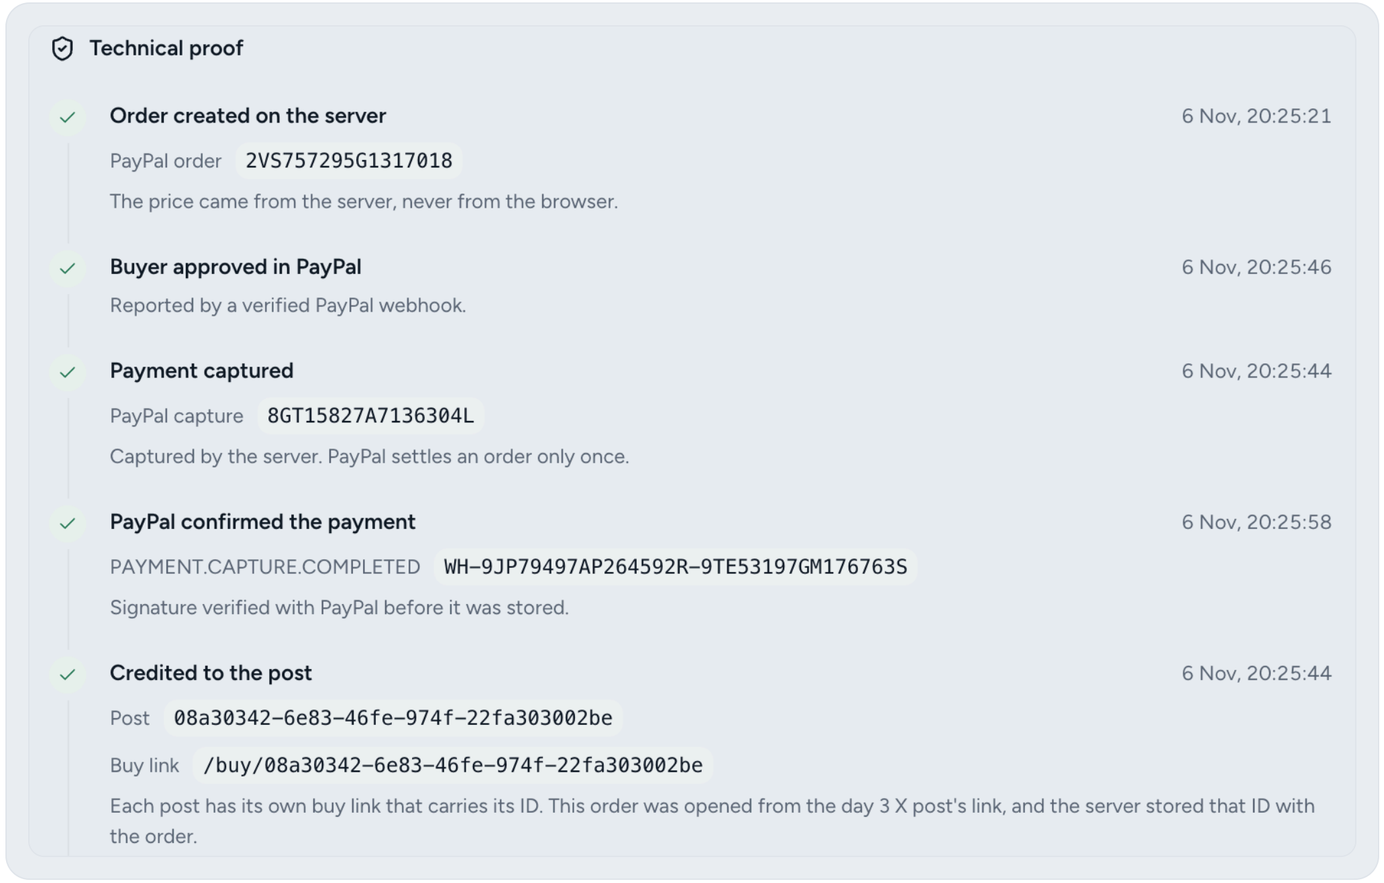

The agent drafts, you approve, a customer pays with PayPal, and the verified purchase shapes the next post you approve.

The proof

PayPal proves which post paid off.

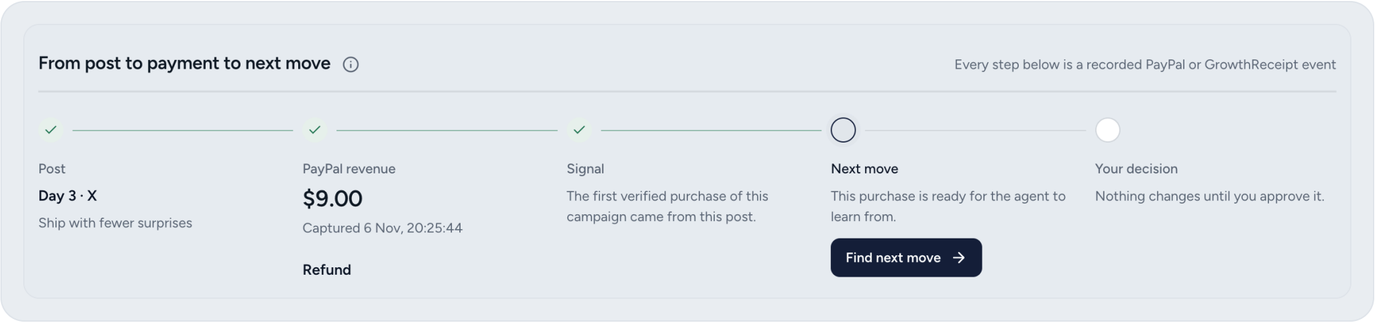

- **Server side orders.** GrowthReceipt creates and captures every PayPal order. The price never comes from the browser.
- **Verified webhooks.** PayPal's signed webhook is checked before a payment counts as evidence.
- **One buy link per post.** Each purchase is credited to the post that earned it.

The impact

Decide from purchases, not likes.

- **Honest evidence.** Code labels the signal as early, a clear leader or a tie. One purchase is never called a winner.
- **Checked with PayPal.** The agent looks up the orders it cites before it proposes one experiment.
- **You stay in control.** Nothing changes until you approve it.

Day	Post	Channel	↓ Revenue	Orders	Payment	Evidence strength
3	Ship with fewer surprises	X	$9.00	1	Verified revenue	Early signal
1	Launch day is the worst time t...	LinkedIn	$0.00	0	Not live	
2	Three things we see on almost...	LinkedIn	$0.00	0	Not live	
4	A launch checklist that checks ...	X	$0.00	0	Not live	

What comes next

More of the loop, on more channels.

- PayPal subscriptions
- PayPal disputes
- More publishing channels
